

FOUNDLY

Beyond Followers. Beyond Connections.

FUND UTILIZATION PLAN

AI-Enabled Social Platform for Skill-Based Talent Discovery

FOUNDER

Vedagya Sharma

PROGRAM

MeitY GENESIS EIR

CURRENT STAGE

Idea Validation / Early Prototype

PROPOSED FUNDING

₹10,00,000

ABOUT FOUNDLY

Foundly is an AI-enabled social platform where creators showcase their work while AI converts their content into structured, skill-based insights that help the right opportunities find them. Creators build profiles, upload work, form communities, and receive AI-assisted feedback consisting of an overall score along with five category-specific skill scores relevant to their craft.

Opportunity providers — recruiters, companies, agencies, producers, music labels and businesses — can discover talent using these skill-based insights rather than relying solely on followers, popularity or personal connections. Foundly combines a social and community layer with an AI-powered talent-discovery engine, positioning it as more than a conventional recruitment or talent-hunt platform.

PURPOSE OF FUNDING

The proposed funding of ₹10,00,000 will be utilized to advance Foundly from its current idea-validation and early-prototype stage into a functional, validated early-stage product. Priority areas include development of the AI-powered skill-evaluation engine, core MVP development across profile, content and discovery features, supporting cloud and computing infrastructure, structured user research, controlled pilot testing with early creator and opportunity-provider communities, and the security, legal and compliance groundwork required for responsible early-stage operation. The overarching objective of this phase is to convert the current concept into a working, tested product ready for continued development and future scaling.

Fund Allocation

NO.	FUND UTILIZATION AREA	AMOUNT	PURPOSE
1	AI/ML Development & Model Integration	₹2,50,000	Develop and test Foundly's AI-powered content analysis and category-specific skill evaluation system, including relevant AI/ML models, APIs and evaluation workflows.
2	Product & Full-Stack Development	₹2,00,000	Develop the core Foundly platform including creator profiles, content uploads, social features, AI results, talent discovery, search/filtering and communication functionality.
3	Cloud, APIs & Computing Infrastructure	₹1,00,000	Cover cloud hosting, database, storage, computing resources, AI/API usage and infrastructure required for development, testing and pilot deployment.
4	UI/UX & Prototype Development	₹75,000	Design and refine high-fidelity user experiences for creator onboarding, profiles, content uploads, AI evaluation, social feeds and talent discovery.
5	User Research & Product Validation	₹75,000	Conduct interviews, surveys and usability studies with creators and opportunity providers to validate user needs, product assumptions and AI evaluation requirements.
6	Pilot Testing & Community Building	₹75,000	Conduct controlled pilot testing with selected creator communities and early opportunity providers, gather feedback and improve the product.
7	Security, Testing & Quality Assurance	₹50,000	Conduct application testing, security checks, performance testing and quality assurance during MVP development and pilot deployment.
8	Legal, Compliance & IP	₹50,000	Support legal, compliance and intellectual-property activities required during Foundly's early development and future commercialization.
9	Contingency / Miscellaneous Product Expenses	₹1,25,000	Cover unforeseen technical, infrastructure, testing and product-development requirements that may arise during MVP development and pilot execution.
TOTAL		₹10,00,000	

ALLOCATION OVERVIEW

Expected Outcomes & Milestones

01

AI Evaluation Prototype
Develop an initial AI-based content evaluation system capable of generating structured skill insights.

02

Functional MVP
Develop the core Foundly platform connecting creators, content, AI evaluation and opportunity discovery.

03

User Validation
Test the product with creators and opportunity providers to validate user needs and workflows.

04

Pilot Deployment
Conduct controlled pilot testing with selected early users and opportunity providers.

05

Product Refinement
Improve the platform based on technical results and user feedback.

06

Commercial Readiness
Establish the foundation required for future scaling and commercialization.
