

VEDAGYA SHARMA

Software Development Engineer | AI/ML & Full-Stack Developer

Bengaluru, Karnataka, India • +91 87702 02016 • veds0711@gmail.com • linkedin.com/in/vedagya-sharma-52536432a • github.com/vedagya-sharma

PROFESSIONAL SUMMARY

Analytical and results-driven **Computer Science Undergraduate** specializing in **AI/ML systems, Generative AI pipelines, and Full-Stack Engineering**. Founder of **Foundly**, with demonstrated ability in leading product architecture from zero to prototype, designing LLM-driven evaluation models, and engineering high-throughput backend services. Strong foundation in data structures, algorithms, relational databases, and RESTful API development, paired with a focus on scalable, business-centric software solutions.

TECHNICAL SKILLS

Languages & Core:	Python, JavaScript (ES6+), C, SQL, HTML5, CSS3, Data Structures & Algorithms
AI & Machine Learning:	Generative AI, Large Language Models (LLMs), Prompt Engineering, Scikit-Learn, NLP, Embeddings
Web & Backend Frameworks:	Flask, Node.js, Express.js, RESTful APIs, Tailwind CSS, Responsive Web Design
Databases & Systems:	MySQL, PostgreSQL, Relational Schema Design, Database Indexing, Query Optimization
Tools & Methodologies:	Git, GitHub, Figma (UI/UX Prototyping), Agile/Scrum, Product Management, CI/CD basics

WORK EXPERIENCE

Founder & Lead Engineer | Foundly Bengaluru, India | 2024 – Present

- Conceptualized, built, and launched **Foundly**, an AI-powered talent discovery ecosystem evaluating creators on verified competency rather than follower vanity metrics.
- Architected an end-to-end **Generative AI evaluation engine** that processes multi-modal creator deliverables and computes objective, category-specific scoring benchmarks for recruiters.
- Engineered responsive interfaces and interactive prototypes in **Figma** and implemented them using modern web standards, accelerating user validation testing by **40%**.
- Directed agile product sprints, feature prioritization, technical roadmaps, and stakeholder discovery interviews with over 50 prospective candidates and hiring managers.

TECHNICAL PROJECTS

AI-Driven Multi-Tenant Restaurant ERP & Analytics | *Python, Flask, MySQL, JavaScript, Tailwind CSS* [Code Repository](#)

- Engineered a full-stack restaurant management platform handling order tracking, automated billing, and live kitchen order display (KOD) with real-time state synchronization.
- Implemented normalized **MySQL database schemas** with indexed relational tables, reducing query latency by **35%** across concurrent table booking transactions.
- Built robust **RESTful endpoints in Flask** secured with role-based access control (RBAC), session management, and integrated data reporting dashboards.

High-Performance University Event Engine | *C, Node.js Bridge, JavaScript, Tailwind CSS, Data Structures* [Code Repository](#)

- Designed a hybrid systems architecture featuring a core processing backend written in **C** using custom memory-managed dynamic arrays, hash tables, and binary search trees.
- Connected the low-level C engine to a lightweight **Node.js IPC bridge**, exposing real-time APIs for high-concurrency event registration, search indexing, and ticketing.
- Delivered sub-millisecond search and participant verification operations capable of effortlessly managing 1,000+ simultaneous student registrations.

NavDisha – Financial Literacy & Micro-Grant Platform | *JavaScript, HTML5/CSS3, Python Microservices, Figma* [Code Repository](#)

- Designed user experience workflows and developed accessible, multilingual frontend interfaces providing actionable financial planning and credit-matching for rural women entrepreneurs.
- Integrated lightweight conversational recommendation logic to translate complex micro-grant schemes into step-by-step eligibility checklists, improving application completion rates.
- Validated product usability through iterative user testing, reducing navigation overhead by **50%** on mobile browsers.

ChemBlocks – Tangible STEM Pedagogical System | *Physical Computing, Product*

Design, Rapid Prototyping

Academic Product Development

- Engineered a tactile educational toolkit featuring modular interlocking physical blocks mapping atoms, oxidation states, and stoichiometric coefficients for chemistry education.
- Conducted user validation trials with educators, demonstrating a **30% improvement** in student comprehension of balancing complex chemical equations.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering (Honors)

Expected Jan 2028

RV University, Bengaluru, India

CGPA: 8.67 / 10.0

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems (DBMS), Operating Systems, Software Engineering, Machine Learning.
