

FOUNDLY

Talent Deserves to Be Found.

AI-Enabled Social Platform for Skill-Based Talent Discovery

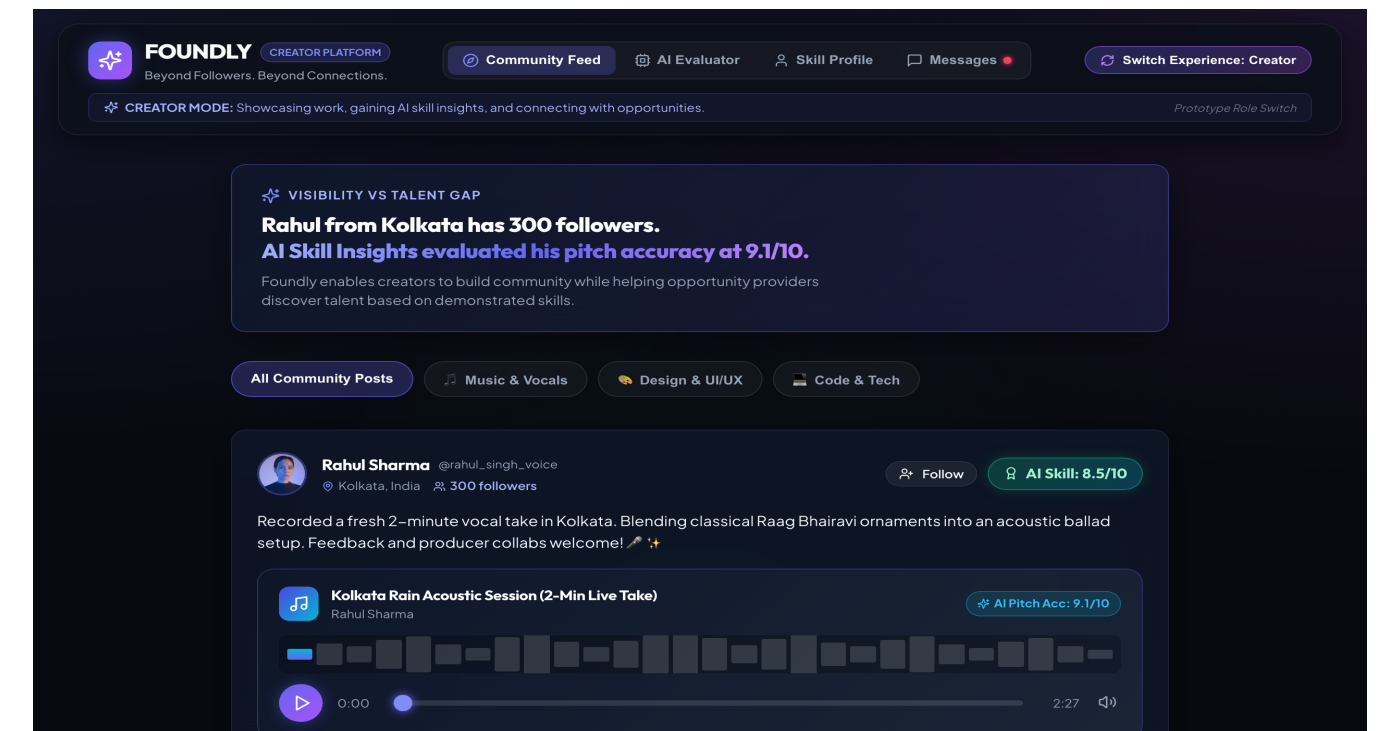

Founder: Vedagya Sharma	Program: MeitY GENESIS EIR
Stage: Functional Web Prototype	Target Sector: Creator Economy / AI Talent Discovery

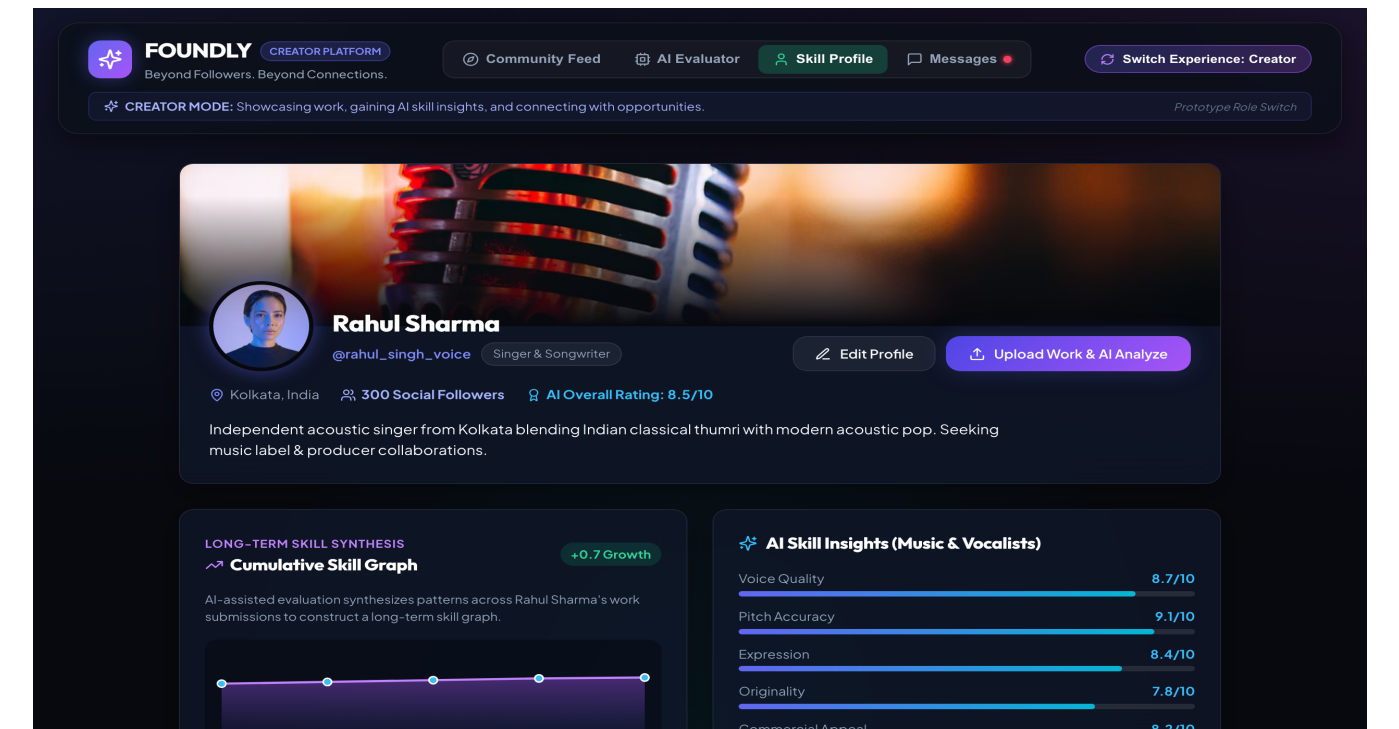

Foundly Interactive Web Prototype — Main Interface Spotlight

From Showcase to Opportunity

Foundly combines social networking with an AI-powered talent discovery layer. Creators showcase their work, receive structured AI-assisted skill insights, and become discoverable to opportunity providers based on demonstrated ability.

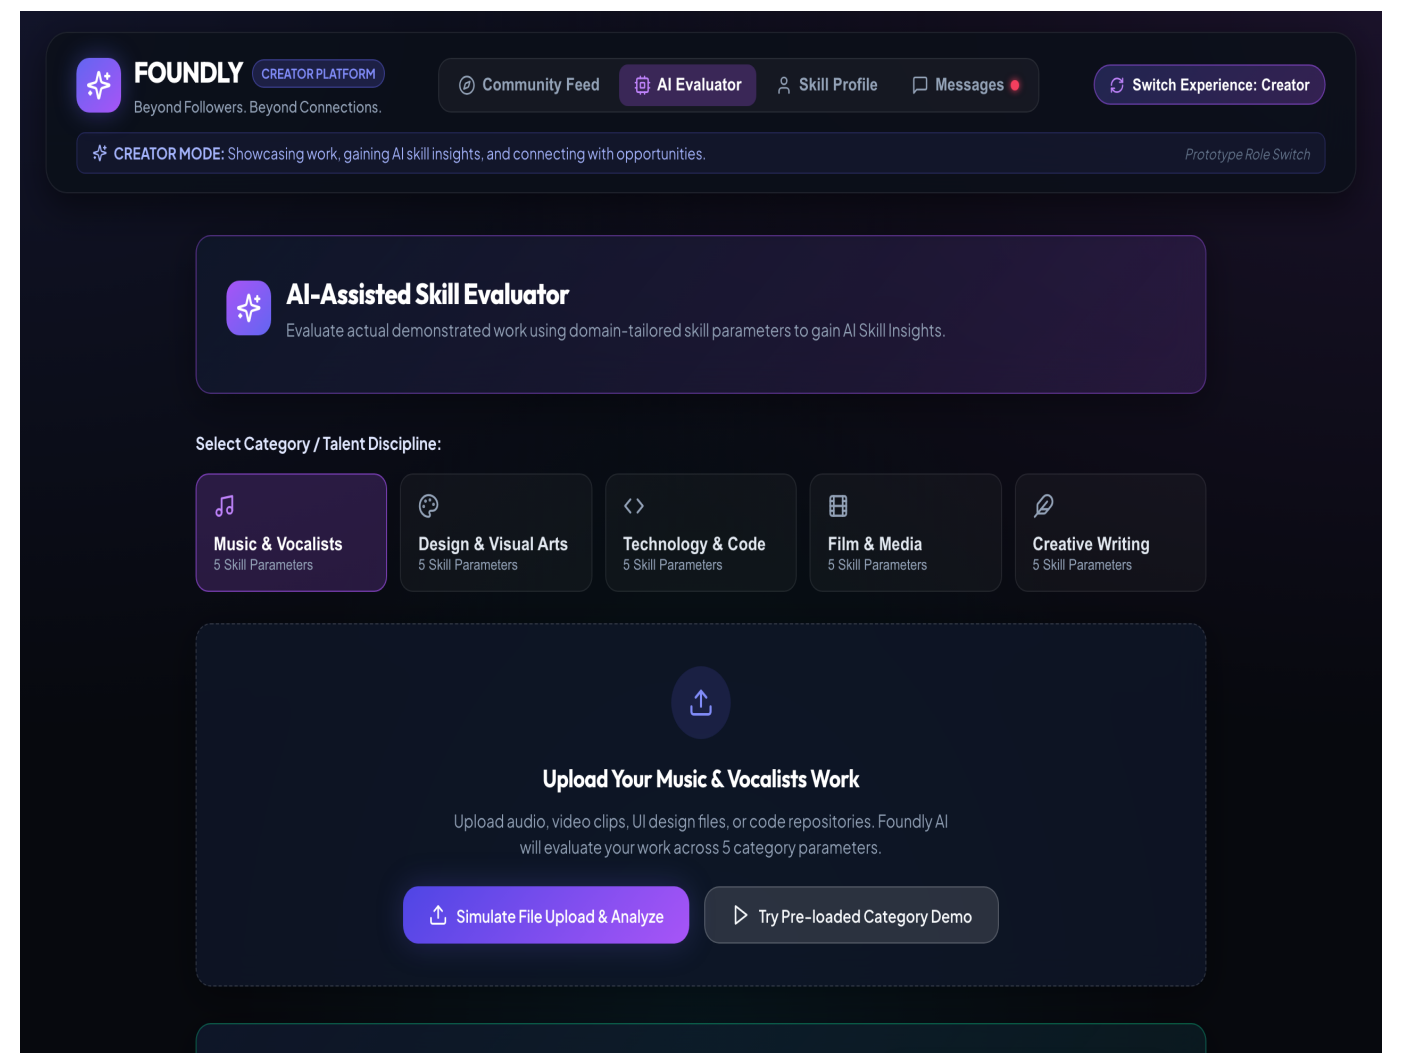

Community Feed — Creators showcase their work, build communities and gain visibility through demonstrated ability.

Creator Profile — A dedicated profile where talent, work and AI-assisted skill insights are presented together.

Turning Content Into Skill Insights

Foundly's AI layer analyzes creator content and converts it into structured skill insights, helping creators understand their strengths while making talent easier for opportunity providers to evaluate.

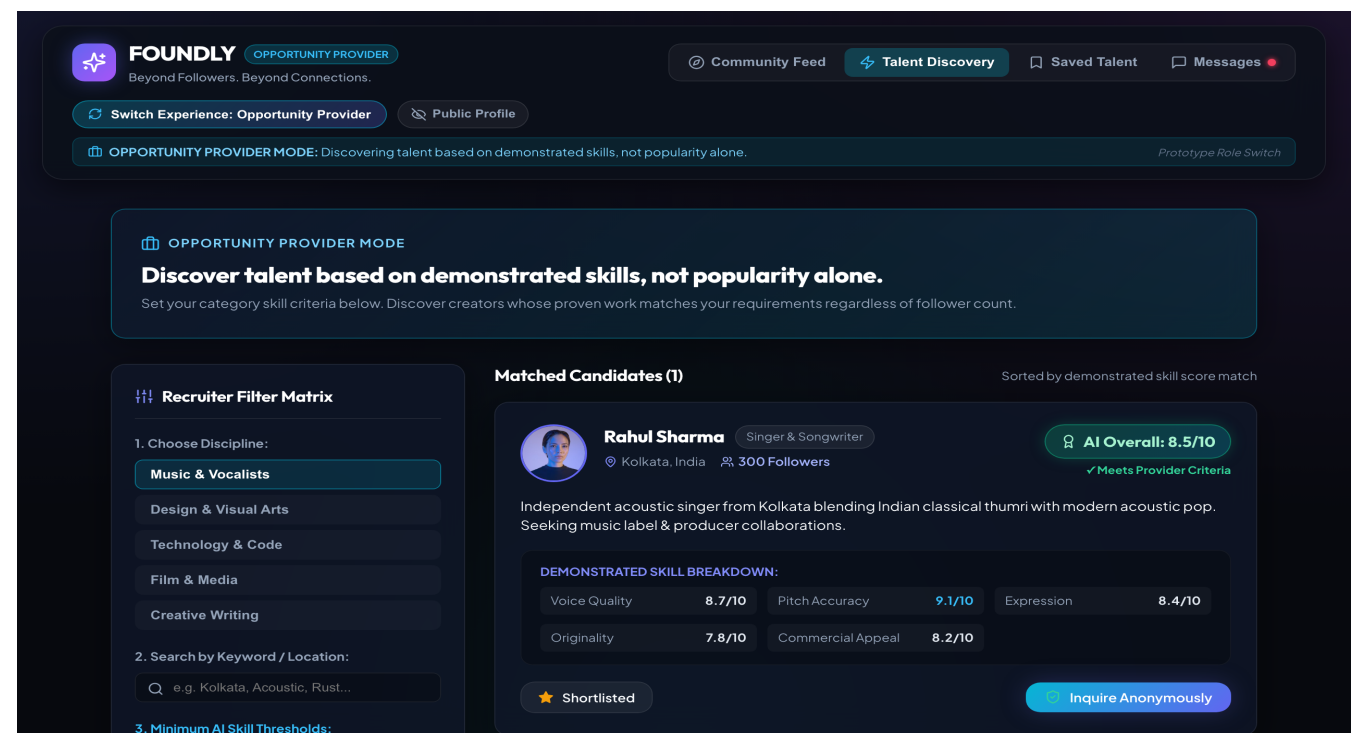

AI-Assisted Skill Insights — Uploaded work is translated into an overall score, category-specific skill scores and structured feedback.

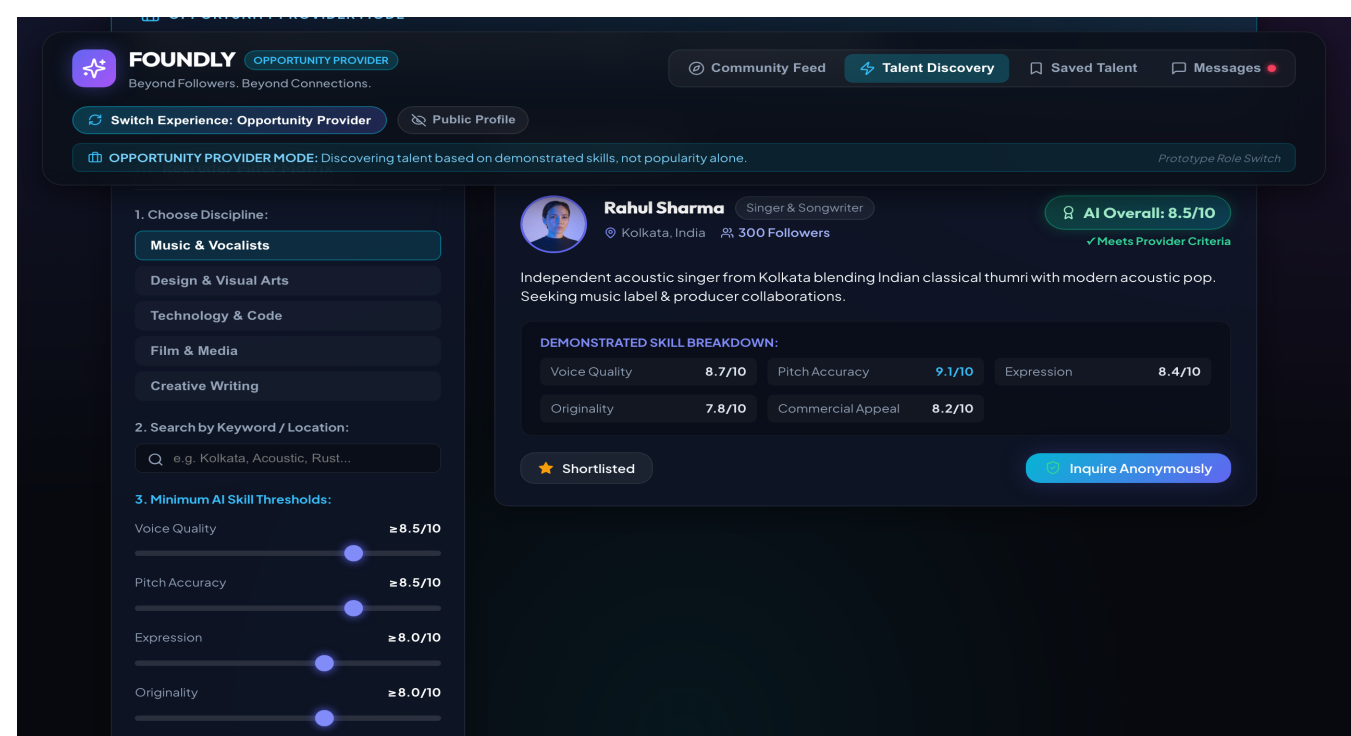

Prototype Concept Notice: AI-assisted evaluation is intended to provide structured skill insights, not an absolute judgment of talent.

Discover Talent by Demonstrated Skill

Opportunity providers can search and filter talent using category-specific skill insights instead of relying solely on followers, popularity or existing networks.

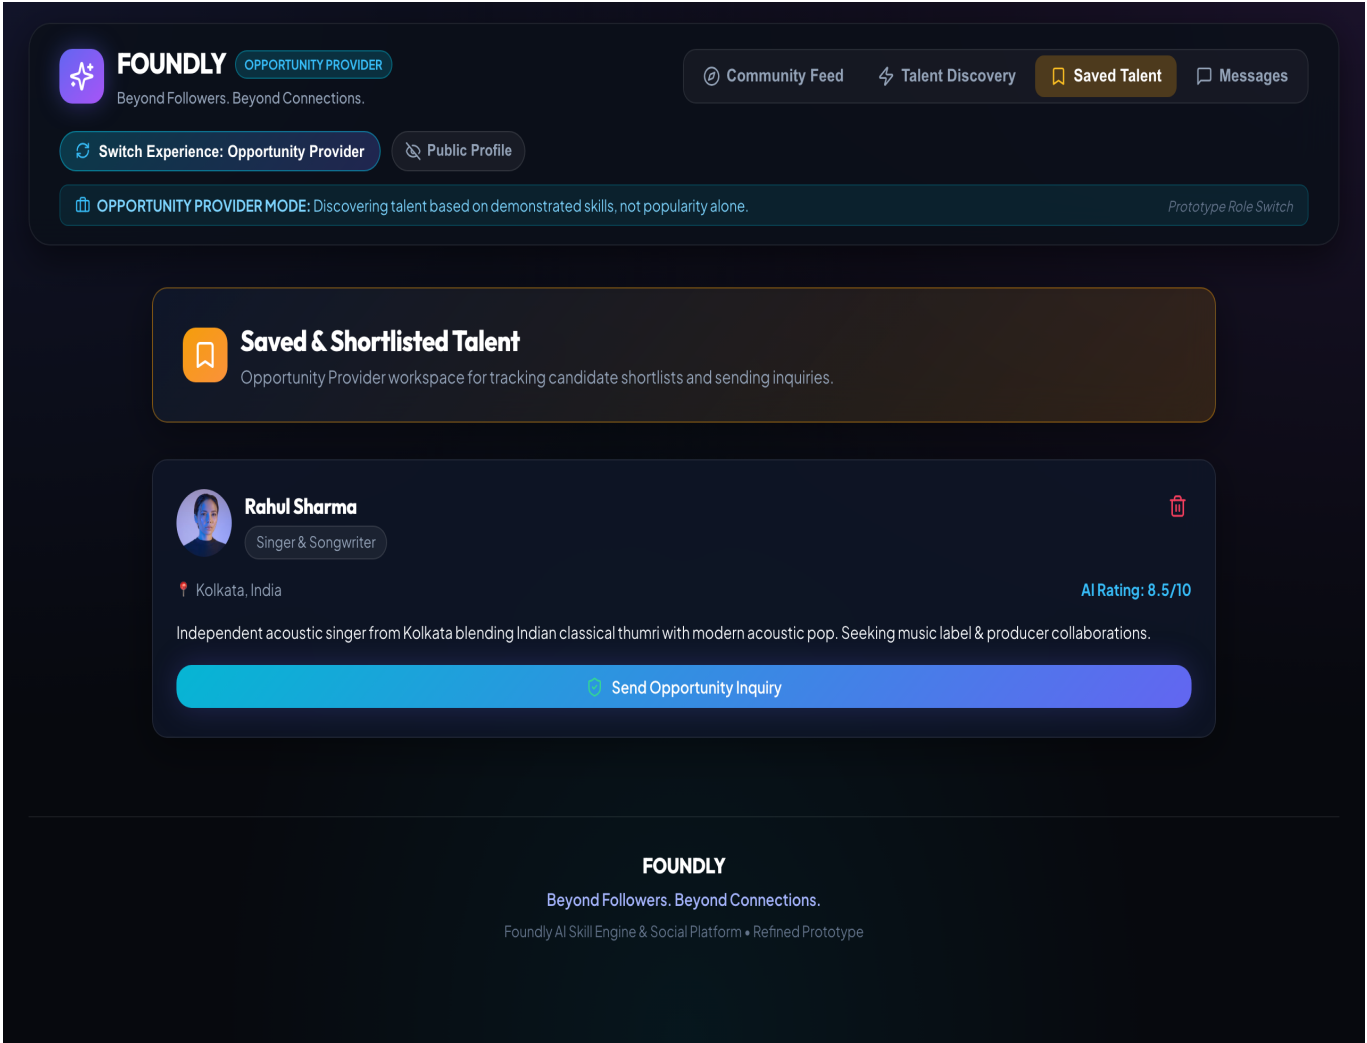

Talent Discovery — Opportunity providers can search and filter creators using AI-assisted skill insights.

Skill-Based Matching — Opportunity providers can evaluate talent using individual skill dimensions rather than relying only on follower count or popularity.

From Discovery to Opportunity

Opportunity providers can explore talent privately, evaluate relevant skills, shortlist promising creators and initiate opportunity-related conversations.

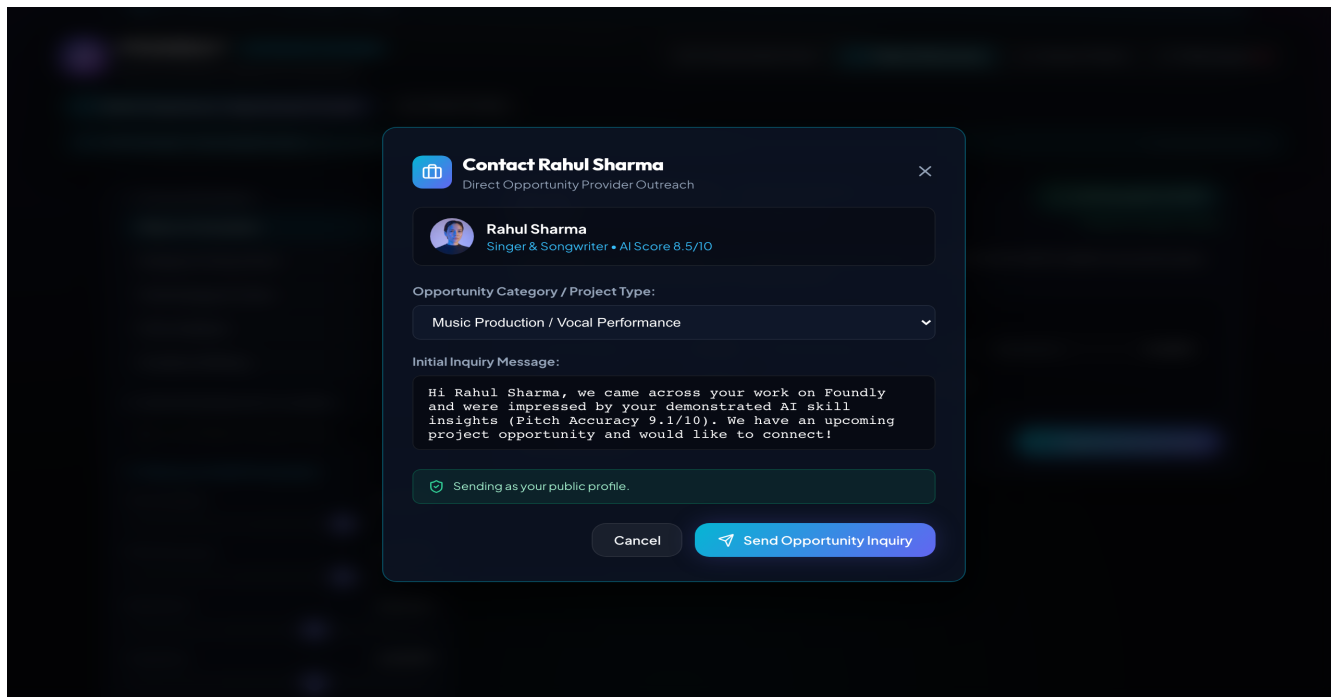

Saved Talent Workspace — Opportunity providers track candidate shortlists and manage direct outreach.

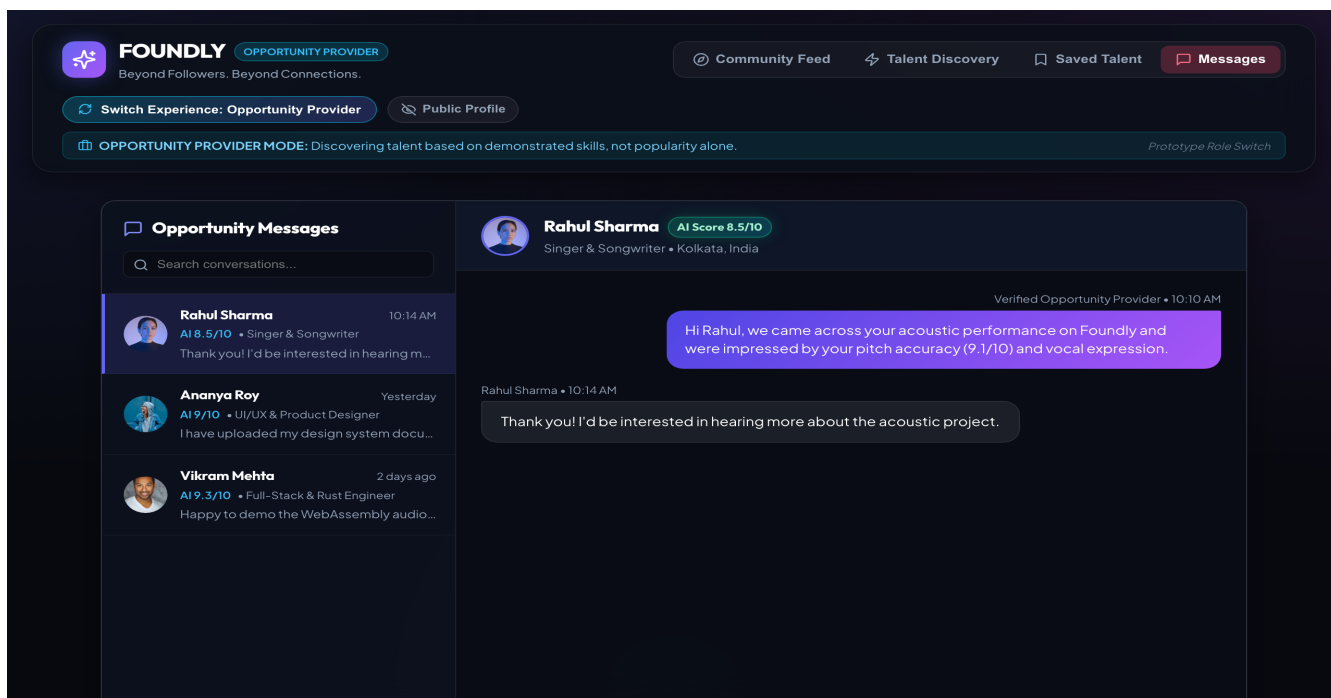

Stealth Discovery Concept: Verified opportunity providers can browse creators anonymously. Identity and credentials remain private until direct outreach is initiated.

Connecting Talent With Opportunities

Once a potential match is identified, creators and opportunity providers can communicate directly and explore collaborations or project offers.

Opportunity Inquiry — Opportunity providers can initiate a conversation regarding potential project opportunities.

Messaging — Creators and opportunity providers can communicate directly after discovery.

Foundly Product Journey & Prototype Status

Foundly aims to make talent discoverable for what people can demonstrate — not simply for how many followers they have.

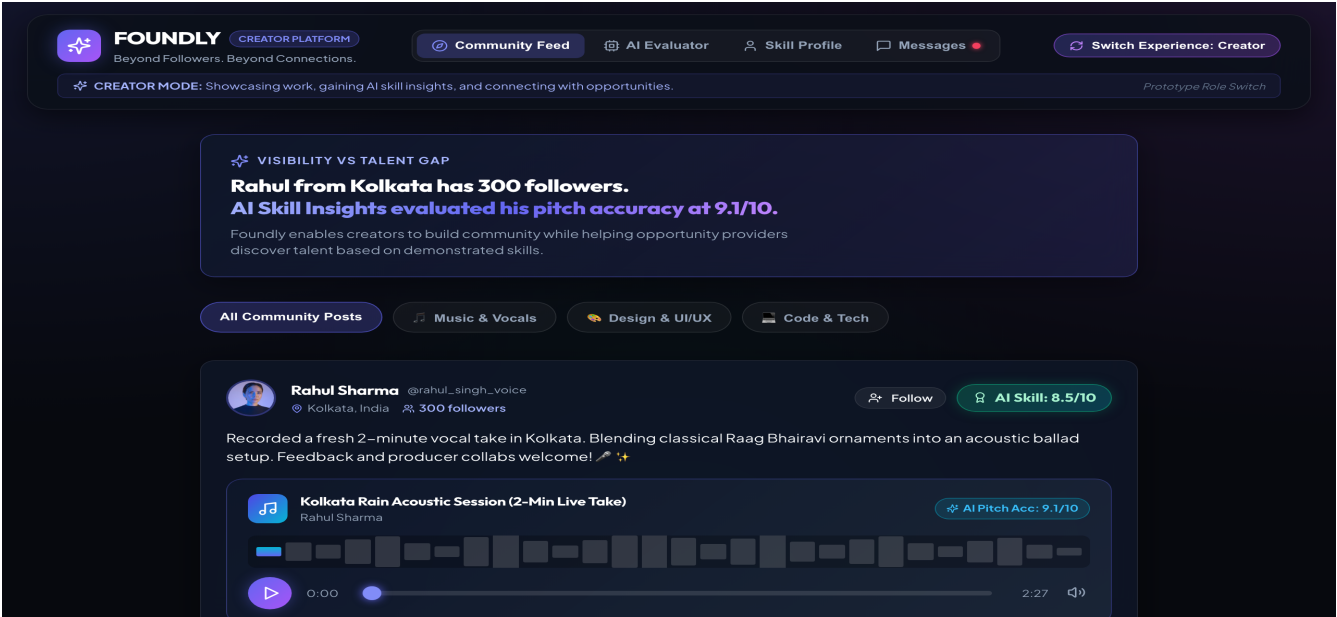

SHOWCASE → AI ANALYSIS → SKILL INSIGHTS → TALENT DISCOVERY → SHORTLIST → CONNECTION

Demonstrated Capabilities:

- ✓ Social/community feed
- ✓ Creator profiles & portfolios
- ✓ AI-assisted skill evaluation concept
- ✓ Skill-based talent discovery engine
- ✓ Anonymous recruiter stealth mode
- ✓ Candidate shortlisting
- ✓ Direct inquiry & 2-pane messaging

Next Development Areas:

- Production AI/ML audio & visual evaluation model
- Authentication & secure profile accounts
- Production database infrastructure
- Industry partner pilots & label trials
- Multi-discipline category expansion

Foundly — Beyond Followers. Beyond Connections.
